EDUCATION

2017 - 2019
DAGON UNIVERSITY

- Philosophy

2024 - Present
NCC EDUCATION

- Level 5 Diploma in Computing (L5DC)

SKILLS

- Javascript | Typescript
- React.js
- Next.js
- Node (Express, Nest.js)
- RTK, React Query
- Strong foundation
- Exceptional Adaptability

LANGUAGES

- English: Upper-Intermediate
- Burmese: Native

PROFILE SUMMARY

Self-taught Software Developer experienced in building modern web applications using JavaScript, TypeScript, PHP, React, and Next.js. Skilled in developing scalable backend systems with Laravel, Node.js, Express, and NestJS, and building business applications such as ERP systems.

Strong understanding of React and Next.js architecture, including rendering strategies such as SSR, CSR, and SSG, with experience using Redux Toolkit, React Query, and Zustand for state and data management. Passionate about writing maintainable, high-quality code and continuously improving programming.

I dedicated significant time mastering programming fundamentals before advancing to frameworks, ensuring a solid foundation in core concepts.

WORK EXPERIENCE

G-Next Myanmar

2024 May - 2026 February

React Developer

- Developed an expense-tracking application using Laravel and Tailwind CSS.
- Gained expertise in TypeScript, React, and Express by building a full-featured social media platform by learning from Sayar Ei Mg rockstar-developer book
- Contributed to Hybrid E-commerce & social media app powered by react.js for UI and along with Nest.js reliability for backend. Integrated Notification feature, Newfeed endless scrolling, Block/Unblock feature, Scroll restoration, UI updates, refactor and performance optimization to the codebase.
- Using Nest.js I have wrote several API such as notification, restore screen position on redirect, blocking/unblocking.

HostMyanmar

2023 September - 2024 April

Junior Laravel Developer

- Managed and enhanced a **Laravel-based** HR project, adding critical features such as salary and attendance modules and troubleshooting
- learnt **Filament** and **Livewire** for project requirement and developed modules related to delivery and implemented PDF exporting for invoices.
- Created several responsive company portfolio templates utilizing HTML, CSS, and Bootstrap.

Frontend Developer

-

PERSONAL EXPERIENCE

Bookmark Graveyard (Telegram Bot)

 [Repository Link](#)

 [Telegram Bot Link](#)

- A scalable link-management bot that automates content curation and user reminders. Built a secure URL processing pipeline featuring keyword-based threat detection and automated domain-based tagging. Leveraged TypeORM and Cron jobs to manage a flexible notification system, allowing users to customize reminder frequency and link volume for saved digital assets. The project is opensourced and can be view by clicking the repository link

Multi-Tenant Learning Management System (LMS)

[This project is currently under active development. For a live demonstration or testing access, please reach out to me via the details provided in the Contact section for credentials.](#)

 [Staging Website Link](#)

- **Full-Stack Development:** Built a responsive B2B platform using Next.js for the frontend and NestJS for a highly modular, multi-tenant backend.
- **Advanced Data Management:** Implemented Drizzle ORM for type-safe database interactions and managed dynamic PostgreSQL schema synchronization across multiple tenants.
- **Cloud Infrastructure:** Integrated Cloudflare R2 for scalable asset storage, including a Scheduled Cleanup Service that automates the lifecycle of soft-deleted assets. AWS EC2 as a server for backend api and vercel for frontend hosting with custom domain.
- **Security:** Implemented JWT with Refresh Token rotation, Role-Based Access Control (RBAC), and multi-tenant context middleware to prevent cross-tenant data leakage.

Architectural & Database Strategy

- **Strategic Migration from Prisma to Drizzle:** Evaluated and executed a database migration to support a schema-per-tenant architecture, leveraging Drizzle ORM's lightweight footprint and superior support for dynamic schema switching all because limitation support from **Prisma** for multi-tenancy.
- **Multi-Tenant Data Integrity:** Mastered the "tenant tax" by implementing a strict Repository Pattern and Context-Aware middleware, ensuring zero data leakage across isolated tenant schemas.
- **Schema Synchronization:** Developed a custom migration runner to handle the complexity of synchronizing updates across the public schema, base_template, and all active tenant schemas simultaneously.

DevOps & Infrastructure Management

- **Cloud Infrastructure Pivot:** Successfully migrated application hosting from Cloudflare Pages to Vercel and AWS EC2, navigating platform-specific build size limitations and wildcard subdomain constraints.
- **Advanced Networking & DNS:** Engineered a wildcard subdomain system using Cloudflare Workers and custom routing to support dynamic tenant registration.
- **Local Environment Tooling:** Standardized local development for multi-tenancy by configuring custom host files and SSL certificates to simulate staging-level subdomain behavior on localhost.
